(54) Title: METHOD AND SYSTEM FOR SPEEDING UP DATA

(57) Abstract: A communication system (100) comprise service provider premises (SPP (120), a plurality of user equipment (110a-c), communication channels (142) and (144) between the SPP (120) and the plurality of user equipment (110a-c), external network (150) and a connection (152) between the external network (150) and the SPP (120). The connection (152) based on IP protocol, or any other communication protocol. Three user equipments (110a-c) and any number other than three be used with the present invention. The external network (150) be the Internet or some other global or wide area network.
